To: Autumn Sutherlin <als03c@acu.edu>

Hello Dr. Sutherlin

First, I hope this email finds you well and if you have started school already (like unfortunately I have) that is good so far.

Secondly, and the reason why I emailed you, I wanted to say thank you. Your biochemistry class is straight up medical school gold. Almost everything that we have talked about I have learned in more detail (generally) in your class. Also, your class is set up just how medical school is. We learn the material before, and ask questions about what we do not understand the next day, which is just how your class was. Ironically, this was my least favorite thing about your class (because I procrastinate), but you can not do this in medical school (obviously).

Thirdly, and I never thought I would say this.... Thank you for making us memorize all the pathways of glycolysis and everything off of it. That has helped me remember so much of the material that we needed to know for medical school.

So, if anyone that is Pre-Health complains about the way your class is structured or all the nuances you made us memorize show them this email because your class is exactly like medical school so far (except we go wayyyyy faster). If they truly do not like your class they should reconsider medical school, that easy.

Thank you for being an awesome teacher. I am extremely grateful now, even though I might not have been when studying for your exams 2 years ago.
