Course Number: NSE 601 Introduction to Nuclear Engineering

or Degree Plan(s):

NSE 601 (Introduction to Nuclear Engineering) is one of the foundational courses for the new graduate program in nuclear science and engineering. It introduces students to the basic principles of how nuclear reactors operate, the different kinds of nuclear reactors, and the basics of reactor design and regulation.

Notes

² Any change to a cross-listed course requires the signature of both department chairs or program directors overseeing the course to ensure that the courses stay in sync. This includes courses taught at other campuses (e.g. BIBL 101 and BIBO 101).

³ For undergraduate majors, a minimum of 30 hours is required. These programs must have a minimum of 6 elective hours, unless the requirements of external accrediting bodies make it impossible. Master's programs

must include a minimum of 30 hours, and doctoral programs must include a minimum of 30 hours beyond the master's.

⁴ When a department/school or dean proposes closing a program, approval routing follows the typical process beginning with the department/school. An administrative proposal by the provost or senior vice president for academic affairs would follow the "provost-proposed" routing on the chart.

Abilene New Course Application

You may delete the preceding instructional pages before submitting application.

Course ID (<i>Subject Code and Number</i>)	NSE 601
--	---------

1. Systems and Catalog Information Complete each item.

A	Course Developer	Jim Drachenberg
B	Course Instructor	Mark DeHart
C	Course Title	Introduction to Nuclear Engineering
D	Course Abbreviation for Banner if title is more than 30 characters	Intro to Nucl Engr
E	College	OSE - Onstead Science and Engineering
F	Department or School	PHYS - Engineering & Physics
G	Number of Credit Hours	3
G1	Number of Lecture Contact Hours	3
G2	Number of Lab Contact Hours	0
H	Is the course for a fixed or variable number of credit hours?	Fixed If variable, explain rationale:
I	Is the course repeatable for additional credit?	No
J	Maximum total number of credit hours a student can earn for this course	3
K	Course Schedule Type	Lecture (LEC) See Schedule Type definitions in the Reference section.

L	Number of Faculty Workload Hours	3
M	Grading Mode	Standard
N	Maximum Enrollment	18
O	Catalog Description (50 words or less)	An introduction to atomic and nuclear structure, radioactive decay, neutron interactions, reactor physics, steady-state and time-dependent reactor behavior, diffusion theory, radiation shielding requirements, reactor types, operational principles, and the regulatory framework for reactor licensing and safety.
P	List any prerequisites (course/s, test scores, class standing, major, etc.)	
Q	List any corequisites (these <i>must</i> be taken at the same time; note that a single requirement cannot be both a prerequisite <i>and</i> a corequisite)	
R	If the course is cross-listed, specify the subject code and course number of the other course	
S	Does this course require any additional student course fees?	No If yes, attach a completed course fee form (see form "Request to Add or Change Course Fees").
T1	Will the course be offered in fall terms?	Yes, every year
T2	Will the course be offered in spring terms?	No
T3	Will the course be offered in summer terms?	No

U	First semester this course will be offered under new Course ID. <i>May not be earlier than the coming fall semester.</i>	Fall 2026
V	Is this course required for a program(s)?	Yes If yes, submit a separate completed curriculum proposal to change the program(s).
W	Should the addition of this course be retroactively applied to the degree plan it supports? <i>This is rare, and rationale should explain compelling extenuating circumstances.</i>	No If yes, provide rationale:
X	Has this course been offered as a Special Topics course? <i>New courses are not required to be taught as Special Topics courses prior to approval.</i>	No If yes, provide course ID, term, and enrollment:
Y	List any courses in which the content overlaps the proposed course. (Course ID and Name). <i>Attach a statement from the instructor/dept chair of the existing course justifying the new offering.</i>	

2. Curriculum

- A. Explain any effects of this course on any degree plans. If the addition of the course alters program requirements, submit a separate [Approval Chart for Curriculum Change](#) to update the program.

Graduate Nuclear Science and Engineering

NSE 601 added as required course in the new graduate NSE curriculum

- B. Justify the addition of this course to the current curriculum, explaining the gap it meets.

NSE 601 introduces students to the foundational principles of nuclear science and engineering that will be referenced throughout the rest of their time in the program. PHYS 461 and CHEM 362 provide theoretical background on the physics and chemistry of atoms and nuclei at the junior-senior undergraduate level. NSE 601 focuses on the application of these principles to nuclear reactors at the first-year graduate level. NSE 601 also provides introductions to reactor operation, design, safety, and regulation; and will be the first course at ACU to cover this material.

3. Course Design

A. Audience and Course Goal

1. Describe the intended audience, including prerequisite skills.

The intended audience is first-year graduate students in nuclear science and engineering.

2. State the overarching course goal(s) in performance terms.

Students completing this course will demonstrate a foundational understanding of nuclear science and engineering principles, including atomic and nuclear structure, radioactive decay, neutron interactions, reactor physics, reactor behavior, and safety. They will be able to apply problem-solving skills within these areas and illustrate and summarize the basic framework of U.S. reactor regulation.

B. Student Learning Outcomes and Measurements

	Student Learning Outcome	Measurement
1	Students <u>apply</u> principles of atomic and nuclear physics to <u>solve</u> foundational problems in nuclear science and engineering	Homework, Exams
2	Students <u>recognize</u> and <u>explain</u> steady-state and time-dependent reactor behavior	Homework, Exams
3	Students <u>apply</u> basic diffusion theory to simple reactor geometries	Homework, Exams
4	Students <u>identify</u> and <u>explain</u> radiation shielding requirements for the various types of radiation	Homework, Exams
5	Students <u>identify</u> and <u>explain</u> types of reactors and their operational principles	Homework, Exams
6	Students <u>identify</u> the basic elements of the reactor regulatory framework	Homework, Exams

C. Text and Resources

Give the full publication information of the textbook/s and other required resources and outside readings. For **combined undergraduate/graduate** courses, make two lists:

- A. full publication information; label **Undergraduate**.
- B. full publication information; label **Graduate**.

4. Supporting Documentation

Required of all applications	
1	Approval Chart for Curriculum Changes
2	Syllabus — Attach the syllabus for the course based upon the anticipated first-semester offering.
4	Library — Submit new course application and syllabus to the Library dean's office. Attach the Library's memo.
Attach if applicable	
5	Content Overlap — Include one document for each course you listed in Section 1Y. Attach statement from instructor/dept chair of existing course justifying the new offering.
6	Departmental Resources — List the resources that support the course and are available only through the department, if applicable. Attach the list of the holdings and the location(s).
7	Resources — List resources (other than library or departmental resources) that are needed to support this course (computers, lab equipment, other technology, etc.). Attach a complete list of all items and indicate possible sources or estimated cost of each. List the sources of any needed funds.
8	Expenses — List additional expenses needed to implement this course (full-time or part-time faculty, graduate or lab assistants, student employees, travel, special student costs, room renovation, storage facility, etc.). Attach a complete list of all items, the estimated cost of each and the source of the funds.
9	Justification — Attach any documents to which you refer in Section 2B.

Introduction to Nuclear Engineering

Instructor: Dr. Mark DeHart (Mark.DeHart@acu.edu)

About the Course

In this course, we discuss the foundational concepts of nuclear science and engineering, including nuclear physics, radiation, reactor systems, and radiation protection. This introduction is designed to equip you with the conceptual and analytical tools necessary to engage in your advanced graduate coursework.

Course number and title: NSE 601 – Introduction to Nuclear Engineering

Credit hours: 3

Semester and year: Fall 2026

Meeting time: Tuesdays and Thursdays at 9:30-10:50 AM

Meeting place: Onstead Science Center (OSC) 345
For your convenience, here is a [link to the ACU campus map](#)

Prerequisites/corequisites: PHYS 222, MATH 286, MATH 361 or equivalent.

Catalog description: An introduction to atomic and nuclear structure, radioactive decay, neutron interactions, reactor physics, steady-state and time-dependent reactor behavior, diffusion theory, radiation shielding requirements, reactor types, operational principles, and the regulatory framework for reactor licensing and safety.

Intended audience: First-year graduate students in nuclear science and engineering.

About the Teacher

Instructor: Dr. Mark DeHart, Associate Professor, Director of the Nuclear Science and Engineering Graduate Program

Office location: Onstead Science Center (OSC) 138

Phone number(s): (325) 674-2066

Email address: Mark.DeHart@acu.edu

Office hours/Contact expectations: MWF 3:00 – 4:00 PM or by appointment

Mission Statements

ACU Mission: The mission of Abilene Christian University is to educate students for Christian service and leadership throughout the world.

College Mission: The mission of the Onstead College of Science and Engineering is to explore and understand God's creation in the natural world and apply the acquired knowledge and principles to address its issues and challenges. The college offers programs in the natural sciences, engineering, and mathematics. These programs combine the rigor of scientific and technical disciplines with the critical thinking, ethical reasoning, and spiritual perspectives that are central to a Christian liberal arts education.

Department Mission: To prepare graduate students for impactful careers across the spectrum of nuclear science and engineering by equipping them with deep scientific knowledge, cutting-edge research experience, and versatile technical and professional skills. The program emphasizes integrity, leadership, and service, modeled through rigorous academic standards and Christian values, while promoting innovation, interdisciplinary collaboration, and professional excellence within the evolving field of nuclear science and engineering.

Unique Christian Perspective:

"Whatever you do in word or deed, do everything in the name of the Lord Jesus, giving thanks through Him to God the Father."

—Colossians 3:17

In NSE 601, we lay a foundation for the rest of your time in the graduate program. A part of that foundation is recognizing God's wisdom in the design of creation, even down to the atomic level. A second part of the foundation is understanding that we can use what we learn to bless others in the name of Christ. Safer, more efficient, more portable reactors allow us to bless the sick, hungry, and thirsty in ways we could not before. Finally, as we lay this foundation, we give thanks. We give thanks to God for creating the laws of nature we study. We give thanks for the minds that allow us to understand the foundational principles delivered in this course. Finally, we give thanks for His call to use the knowledge we gain for His service.

Course Content

Outline of topics:

- Atomic and nuclear physics
- Principles of radiation and radioactive decay
- Nuclear reactors and reactor behavior
- Basic neutron diffusion theory
- Radiation protection and shielding
- Reactor licensing and safety

Format of Class

Format of Class: Introduction to Nuclear Engineering is delivered in a traditional, face-to-face lecture format. You will be given readings to complete prior to class time. We will present example problems as well as questions designed to generate discussion with your peers. Come ready to ask questions and engage class discussion!

On-line: If we ever need to meet on-line, we will use Zoom. In such instances, we will generally meet during our normal class times and do our best to recreate the face-to-face experience. In light of this, it is extremely important that you continue to come prepared.

Instructional Materials

Course texts:

Introduction to Nuclear Engineering, 4th edition, Lamarsh and Baratta (required)

Learning Outcomes

Student Learning Outcome	Measurement
1. Students <u>apply</u> principles of atomic and nuclear physics to <u>solve</u> foundational problems in nuclear science and engineering	Homework, Exams
2. Students <u>recognize</u> and <u>explain</u> steady-state and time-dependent reactor behavior	Homework, Exams
3. Students <u>apply</u> basic diffusion theory to simple reactor geometries	Homework, Exams
4. Students <u>identify</u> and <u>explain</u> radiation shielding requirements for the various types of radiation	Homework, Exams
5. Students <u>identify</u> and <u>explain</u> types of reactors and their operational principles	Homework, Exams
6. Students <u>identify</u> the basic elements of the reactor regulatory framework	Homework, Exams

Assessment and Grading

Assessment activities: Your course grade is determined from assignments and exams. Approximate weights are as follows:

Weekly Homework Assignments	25%
Exam 1	25%
Exam 2	25%
Final Exam	25%

Final grade calculation:

Range of Points	Final Letter Grade
90%-100%	A
80%- 89%	B
70%-79%	C
60%-69%	D
Below 60%	F

Rules for discussing grades: Please respect the privacy of your peers and do not pressure your classmates to discuss their grades with you. I welcome the opportunity to discuss any of your grades. Grades are considered set two weeks after the grades have been posted to Canvas. Any objection must be received prior to conclusion of the two-week period, otherwise I will assume you consent to the posted grade.

Weekly Homework: Each week you will be assigned a set of homework problems to complete. You will generally be given one week to complete the assignment. Problems will be drawn from a variety of sources, including the course textbook, original problems written by your instructor, and real-life scenarios. By attaching your name to the assignment, it is expected that you are capable of reproducing the solution independent of your classmates or other tools such as AI.

In-class Exams: Twice during the semester, you will be given a written exam to be completed in class. The exam will draw from assigned problems, example problems, lectures, and outside readings. The exams are to be completed without assistance of your classmates. You will be provided instructions on any approved external aids.

Final Exam: You will be given a cumulative final exam during the standard final exam time for the class. You will complete the exam without assistance of your classmates. You will be provided instructions on any approved external aids.

Use of unapproved external aids on homework or exams is a violation of academic integrity.

University Resources

I care about your class experience. The university also has a number of resources in place to support the ACU community both in this class and all aspects of university life.

Reporting Violations / Concerns / Complaints

Incident reports alleging violations of Student Conduct or concerns/complaints can be submitted [here](#). Please use the form to submit information about an incident to Student Life / Office of the Dean of Students.

SOAR (Student Opportunities, Advocacy, and Resources):

SOAR partners with faculty, staff, parents and students to assist ACU students and connect them to resources available to support their path to success. For more information about SOAR or to make a SOAR recommendation, see <https://acu.edu/soar-program/>.

Mental Health Resources

As a student you may experience a range of issues that can cause barriers to learning, such as strained relationships, increased anxiety, alcohol/drug problems, feeling down, difficulty concentrating and/or lack of motivation. These mental health concerns or stressful events may lead to diminished academic performance or reduce a student's ability to participate in daily activities. Abilene Christian University is committed to supporting students addressing any of these concerns.

You can contact the [Medical and Counseling Care Center](#) at counseling@acu.edu, or by calling 325-674-2626. In addition, you can access free confidential counseling services through the Timely Care app by downloading their app on any device. In a crisis situation contact the National Suicide Prevention Hotline open 24/7 by dialing 988, or call the Police at 911.

University Policies

ADA Compliance Policy:

Abilene Christian University is dedicated to removing barriers and opening access for students with disabilities in compliance with ADA and Section 504 of the Rehabilitation Act. The ACU website provides more information at <https://acu.edu/about/uap/overview-2/about-2/>. Please contact me to discuss any approved accommodations that you require for this class.

Title IX Policy:

At ACU, we strive to comply with all applicable legal requirements prohibiting, preventing, and responding to sexual misconduct against any member of the ACU community. The full Title IX policy and process can be found at <https://acu.edu/human-resources/title-ix-and-sexual-misconduct-information/>.

Academic Integrity Policy:

Academic integrity is demonstrated by behavior that honors the learning environment, regardless of setting, context, location or modality. ACU's Academic Integrity Policy can be found at <https://acu.edu/office-of-the-provost/academic-policies/>.

Course Policies

Attendance/tardiness: Please do not attend in person if you feel ill, are experiencing symptoms of illness, or have a confirmed exposure to someone with a contagious illness, e.g., COVID-19. At your earliest convenience, please let me know that you need to join remotely. Our class will be accessible to you in a virtual environment, and I will work with you to ensure you have access to the necessary course material and a reasonable opportunity to submit assignments for full credit. Unless you are ill, taking precautions for illness, or engaged in a university-approved activity, daily attendance is *essential*. If you need to be absent, notify me **beforehand**. If you cannot notify me beforehand, contact me as soon as possible to let me know the reason. Regardless of absence, you are responsible for the material. If absent from a presentation, your grade will be zero unless I grant prior approval. You must be on-time to class. Persistent tardiness is grounds for a reduction in your overall grade.

Participation: Participation in class is critical for you, your peers, and for me to be the effective instructor you deserve. Participation is considered in your final grade assessment. Misconduct in class will not be tolerated. Mistreatment of others, including breach of verbal decorum, is grounds for removal from class. Refer to the [ACU student handbook](#) for more information on such policies.

Late assignment/exams: No late assignments will be accepted.

On-line Decorum: Just as you treat people with respect in the classroom, I expect you to extend that respect to on-line forums, as well. Exercise the Golden Rule with liberality and give each other the benefit of the doubt, when possible.

Dress Code: Please follow the student guide. If you are unsure, do not wear it. Respect your classmates. I reserve the right to ask you to remove hats, e.g., during exams.

Drop Policy: All university policies and deadlines must be followed.

Technology use: Cell phones, laptops, iPods, or other electronic devices are not allowed in face-to-face class unless we use them corporately. If I determine your electronic device is disturbing the class or distracting you or others, whether in a face-to-face or virtual setting, you will be dismissed. If such distractions become a pattern, I will not hesitate from further action, including expulsion from the course.

Academic Integrity: DO. NOT. CHEAT. All university policies concerning academic misconduct—including plagiarism and cheating—apply implicitly to all assessment activities whether or not it is explicitly stated on the assignment. Additionally, I expect you to report academic misconduct if you witness it. ***Failure to report academic dishonesty is considered academic dishonesty, at my discretion.*** Assignments submitted in your name must reflect your original work. Copying the work of *anyone*, past or present, is a violation of Academic Integrity and will lead to disciplinary action including but not limited to loss of credit, course grade reduction, and automatic course failure.

AI: Machine learning and artificial intelligence are increasingly important tools that show up in ways we may not even realize. Generative AI, e.g., Chat-GPT, has raised challenging questions related to education and ethics. It will likely be many years before we begin to understand the impact on student learning. While there is no one-size-fits-all solution and policies will surely evolve, at this time, the use of generative AI is not authorized as a tool in my class. The goal in my course is not to get you to the point where you can tell a bot to solve or write something for you. My goal is to help you develop the skills to think critically and write scientifically, yourself. In general, generative AI is also not authorized as a tool for writing code or solving problems. If you believe that use of generative AI is essential to your assignment, you must discuss it with me before using it as a tool. In your professional life, you will almost certainly use AI as an aid. We want you to be fully equipped to understand and evaluate the quality of the information it provides you. To that end and at this time, use of generative AI is a violation of academic integrity.

Calendar

Refer to Canvas Calendar for the most up-to-date information. Modules are already in place for each week's activity. Please refer to the [university academic calendar](#) for key dates relevant to our campus.

DATE	TOPICS COVERED	Assignment
Week 1	Ch 1 – Nuclear Engineering Ch 2 – Atomic and Nuclear Physics	HW 1

Dr. Mark DeHart
Associate Professor
Director of the Nuclear Science and Engineering Graduate Program
Abilene Christian University
Mark.DeHart@acu.edu

Re: Introduction to Nuclear Engineering (NSE 601)

Dear Dr. DeHart,

Thank you for submitting Introduction to Nuclear Engineering (NSE 601) to us for review. I have reviewed it in accordance with the ACU Syllabus Guidelines. I found the syllabus to meet all aspects of the checklist.

Please note that this letter is intended as a reference, which will be read by the department chair and council members, who may also have questions or comments of their own. If you have any questions, please feel free to let me know.

Sincerely,

Scott Hamm

Dr. Scott E. Hamm,
Assistant Director, Adams Center

DATE: December 12, 2025
TO: Dr. Mark DeHart
FROM: Mark McCallon, Associate Dean for Library Services
RE: Course Application for NSE 601- Introduction to Nuclear Engineering

After reviewing the course application, the library can support the proposed course. Please contact Mark McCallon (mccallonm@acu.edu), Librarian Liaison to the Department of Engineering and Physics, if you will require additional library resources in the future to support the course. Thank you for letting us review the course application.
