

Encouraging girls in Science, Technology,
Engineering and Math

April 23, 2012

Dear Jennifer,

Thank you so much for contributing your time, energy, and resources to conduct one of the stations for our GROW with STEM program for middle school girls. If not for your collegiality and commitment to service to our community, the University and your profession, we would not have been able to have such a fantastic day encouraging girls in Science, Technology, Engineering, and Math.

The 34 middle school girls who participated had a great time interacting with you, and the activities that you took the time to carefully plan and prepare made the experience incredibly rich for them. Thank you for your hospitality in welcoming them warmly to our campus, and your thoughtfulness in working with them.

Thank you once again for your participation in this event. Although it was only our first year, it was an amazing success, and you were integral to that success.

Sincerely,

Jennifer W. Shewmaker, PhD and Sarah K. Lee, PhD
Co-Directors, GROW with STEM Project
