

Fluid Mechanics – ENGR 333, Section 01

Abilene Christian University

Spring 2015

Course Description

The purpose of this course is to provide engineering students with the fundamentals of fluid mechanics. This course will provide students with a set of tools and concepts that are directly applicable to pipe, systems open channels, pumping plants, and measurement of fluid flows as well as other related problems that may encountered as practicing engineers. **Prerequisites:** *ENGR 220. Concurrent enrollment in MATH 361. Credit hours: 3.*

Class Meeting Times and Location

This class meets Monday, Wednesday, and Friday from 10:00 a.m. to 10:50 a.m. in Foster Science Building 350.

Required Text

The required text for this course is *Fundamentals of Fluid Mechanics*, 7th, by Munson, Okiishi, Huebsch, and Rothmayer, John Wiley & Sons, 2012, ISBN 978-1-118-11613-5.

Intended Audience

This is a required course for Engineering majors and intended to be completed during their Junior year. Differential equations and statics competency are required for all students.

Catalog Description

Overview of fluid static and dynamic properties; principles of conservation of energy and momentum, flow of real fluid; flow of ideal fluid; laminar and turbulent flow regimes. Application of fluid mechanic laws to engineering problems and design elements.

Contact Information

Name: Dr. Timothy Kennedy, Assistant Professor of Engineering
Office: Foster Science 319
Phone: 325-674-2165
Email: timothy.kennedy@acu.edu
Office hours: Daily 8-10 a.m. Additional office hours can be arranged as needed.

The mission of ACU

To educate students for Christian service and leadership throughout the world.

The mission of the College of Arts and Sciences

To educate students for worldwide Christian service and leadership through programs of study and other learning experiences that blend a liberal arts education with professional and career education.

The mission of the Engineering and Physics Department

The ACU engineering program strongly supports the university's mission of educating students for Christian service and leadership throughout the world. In support of this mission, ACU engineering graduates will attain:

-A deep and broad understanding of engineering principles and practices as evidenced by

professional employment, continued professional development, and graduate study in engineering or other professional fields.

- An extensive knowledge of the innovative design processes unique to engineering professionals as demonstrated by using critical thinking skills to contribute to the scientific and technical literature, patents and intellectual property, professional societies, and creative designs.

- A thorough understanding of Christian service and leadership as shown in their commitments to professionalism, ethics, and service and leadership within the engineering profession, the church, and society.

Teaching Philosophy

Engineering and physics are well respected professions. The public places great trust in these professionals being honest, competent, and ethical. Many codes of ethics for these fields indicate that the commitment to protecting the health, safety, and welfare of the public is of paramount importance. These values are in harmony with Christian principles and ideals. Christian engineers should be honest (Matthew 5:37), work hard to ensure competency (Colossians 3:23), and put the public's interest ahead of his or her own (Luke 6:31). In light of these principles, this course will be taught such that you will gain an appreciation for the professional nature of engineering and physics. It will be taught so as to give you every opportunity to begin to develop competency in these fields. This will require reading assignments, homework, quizzes, tests, and group discussion. The instructor especially encourages the discussion of topics that would bear on integrating faith and professional responsibilities (cheating on licensure exams, weapons design and manufacture, environmental laws and employment opportunities in developing nations, etc.).

Learning Objectives

In this course students will learn the applied physics of fluid statics and fluid dynamics needed to collect, analyze, and design engineering problems related to the storage, handling, and transport of fluids.

Competencies and Measurements

	Competency	Measurement
1	Identify and apply fluid properties and analyze and solve fluid mechanics problems.	Daily homework, weekly quizzes, exams 1,2,3, final exam.
2	Interpret conservation laws and apply them to analyze problems in hydrodynamics.	Daily homework, weekly quizzes, exam 1, exam 2, final exam.
3	Properly identify and apply systems and control volume methods based on conservation principles.	Daily homework, weekly quizzes, exam 2 and 3, final exam.
4	Analyze pipe flow using associated concepts	Daily homework, weekly quizzes, exam 3 and final exam.
5	Characterize, analyze, and design open channels for steady one-dimensional flow.	Daily homework, weekly quizzes, exam 3 and final exam.
6	Differentiate and apply principles of dimensional homogeneity.	Daily homework, weekly quizzes, exam 2 and final exam.
7	Use Basic Software tools to analyze data and create mathematical models	Homework assignments requiring the use of Excel, Matlab, etc.
8	Analyze boundary layer flows and drag for hydraulic analysis.	Homework, weekly quizzes, exam 3, final exam.

Course Policies

Academic Integrity

Academic integrity is defined as academic work completed as assigned for each class by the individual or group responsible for the work. Violations of academic integrity and other forms of cheating involve the intention to deceive, mislead, or misrepresent and therefore, are a form of lying. Such actions are contrary to behavioral norms that flow from the nature of God. Academic misconduct includes, but is not limited to, the following: 1) Failing to give credit to sources used in a work in an attempt to present the work as one's own, 2) Submitting papers or projects obtained from another source (e.g., research service or club paper file) as one's own, 3) Falsifying information orally or in writing, and 4) Receiving, giving, or using unauthorized aid on an examination or quiz. An example of academic misconduct specific to this course might be copying an instructor's solution while their back is turned and then sharing the solution with classmates. All parties involved would be guilty of misconduct. Academic misconduct may result in, but is not limited to, a zero on the assignment and/or an F in the course. Additionally, the department chair, Dean of the College of Arts and Sciences, and the Dean of Student Life will be notified. See the full university policy, including how to appeal a decision, by following this link: <http://www.acu.edu/academics/provost/policies/index.html>.

Attendance Policy

Attendance is expected at all class sessions. It is also expected that you arrive promptly. If you are absent or tardy it will negatively affect your homework and quiz grades. Typically, classes will involve the presentation and discussion of new material, discussion of textual reading assignments, or the consideration of problems to solve. Occasionally during class, students will work in small groups to solve problems. You are required to attend at least 80% of class meetings in order to receive credit for the course. For TR classes, you cannot miss more than 6 times regardless of the reason. If you miss more than 20% of the classes, you will be dropped from the class with a WF. This grade averages in your GPA as an F.

If you are absent from class, it is your responsibility to get the lecture notes and class assignments before the next class meeting.

Course Assignments	Due Date*	Weight
Daily Homework Unless notified to the contrary, you are highly encouraged to work together on the homework assignments. When working together students should not copy one another's answers, but help guide and teach one another when one student understands a concept more clearly. Homework will be assigned at each meeting (with the exception of exam days) and due at the beginning of class the following meeting. Homework is due at the beginning of class on the due date and must be submitted in person. To get full credit, the homework must be completed on engineering computation paper and turned in on time. Additionally, all work in the solution process (including units) shall be documented in a neat and logically arranged manner, clearly show the final answer with the correct units. <u>Late homework will not be graded</u> (if you only have part of it done, turn in what you have done on time). <i>Homework problem solving approach:</i> 1. Restate the problem and sketch the system 2. Identify the given information 3. Identify the governing equations and state assumptions	Each Meeting	25%

4. Solve for unknowns and calculate results 5. Discuss the results		
Quizzes A total of 12 quizzes will be given, typically at the beginning of class (note none will be given on exam weeks). Thus, it is important that you be in class and on time to complete the quiz. No makeup quizzes will be given except in the rare circumstances of pre-approved absences. However, the lowest quiz grade will be dropped in calculating the quiz portion of your final grade. Quiz material will cover previous lecture material, recent homework assignments and/or the text reading assignment for that day. All assignments, quizzes, and exams are considered to be comprehensive. That is, it will be likely that you will need to sufficiently know and understand previously covered material to adequately solve currently covered problems on quizzes or exams. No unauthorized help may be given or received on the quizzes.	Mondays beginning January 19	15%
Regular Exams (2 @ 15%, 1 @ 10%) Three regular exams and one final exam will be given during the semester. Your lowest regular exam score will be worth 10% or your grade, while the other two regular exams will be worth 15%. All exams are comprehensive and will emphasize problem solving both qualitatively and quantitatively. Calculators may be used during the exams, however only NCEES approved calculators will be permitted during tests. This is to help you begin preparing for the FE exam. If you are caught using a non-approved calculator, your test will be collected and your grade will be a zero. The approved calculators include the following: • Hewlett Packard – HP 33s, HP 35s, and no other • Casio – All FX-115 models. Any Casio calculator must contain FX-115 in its model name. • Texas Instruments – All TI-30X and TI 36X models. Any TI calculator must contain either TI-30X or TI-36X in its model name. • If you are unsure about your calculator, it is your responsibility to check with the instructor for approval. Exams will likely be closed book and no unauthorized help may be given or received on the exams.	February 12 March 19 April 23	40%
Final Exam The final exam will be comprehensive in nature including any new material covered after the third exam. <u>Exams may not be taken late without preapproval.</u>	May 4 from 10:00 a.m. to 11:45 a.m.	20%

Calculation of Final Course Grade*

The grading scale will be as follows:

90% and above	A
80% - 89%	B
70% - 79%	C
60% - 69%	D
59% and below	F

*Instructor reserves the right to decrease the lower bound of the grade cut-offs.

ADA Compliance Statement

"Abilene Christian University is dedicated to removing barriers and opening access for students with disabilities in compliance with ADA and Section 504 of the Rehabilitation Act. The Alpha Scholars Program facilitates disability accommodations in cooperation with instructors. In order to receive accommodations, you must be registered with Alpha Scholars Program, and you must complete a specific request for each class in which you need accommodations. If you have a documented disability and wish to discuss academic accommodations, please call our office directly at 325-674-2667."

Tentative Course Schedule

While every effort will be made to closely follow this schedule, there may be a need to deviate from it. The instructor reserves the right to alter this schedule to best achieve the objectives of the class.

Assignments may vary from that presented below, but will be similar in content, number, and frequency.

Date	Week	Sections	Topics and Events
January 13, 15	1	Ch. 1	Introduction
January 20, 22	2	Ch. 2, 3	Fluid Properties, Pressure, Manometry, Hydrostatic Forces on Plane Surfaces
January 27, 29	3	Ch. 3	Hydrostatic Forces on Plane Surfaces, Forces on Curved Surfaces, Buoyancy
February 3, 5	4	Ch. 3	Forces on Curved Surfaces, Buoyancy
February 10, 12	5	Ch. 4	Flow Description, Conservation of Mass and Energy, Test 1 (Chs 1-3)
February 17, 19	6	Ch. 4, 5	Conservation of Mass and Energy, Linear Momentum and Energy, Continuity, Bernoulli, and Energy Equation
February 24, 26	7	Ch. 6	Conservation of Momentum, Applications
March 3, 5	8	Ch. 7	Conservation of Energy, applications
March 10, 12			Spring Break
March 17, 19	9	Ch. 8, 9	Dimensional Analysis, Similitude, Boundary Layer, Test 2 (Chs 4,5,6,7)
March 21, 23	10	Ch. 9, 10	Pipe Flow Problems, Minor Losses, Single and Parallel Pipes
March 31, April 2	11	Ch. 14	Pump Types, Performance Curves, System Curves
April 7, 9	12	Ch. 14	Open Channels, Uniform Flow, Specific Energy
April 14, 16	13	Ch. 15	Rapidly Varied Flow, Hydraulic Jumps, Gradually Varied Flow, Water Surface Profiles
April 21, 23	14	Ch. 13	Uniform Flow, Rapidly Varied Flow, Gradually Varied Flow, Flow Control and Measurements, Test 3 (Chs 8, 9,10,14,15)
April 28, 30	15	Ch. 9, 11	Drag, Lift, Review for Final Exam
May 4	16		Final Exam
