

MATH 334 and MATH 432

We are requesting to change MATH 334 (Linear Programming) from a fall, even year course to a fall, odd year course. We are making this request so that the number of courses and sections each fall is about the same. We currently have more courses and sections offered in fall, even years than fall, odd years.

In addition, we are requesting that MATH 432 (Operations Research) change from a spring, odd year course to a spring, even year course. MATH 432 is a continuation of MATH 334.

These courses are not part of a required sequence for mathematics majors. However, they are upper level menu selections on several mathematics degree plans.
