

MATH 351 and MATH 453

We are requesting that the schedule for offering MATH 351 and MATH 453 be changed. The demand for MATH 351 has decreased during the past several years so that it is efficient to offer this course every spring. MATH 453 is already offered once every two years.

Our proposal is to make MATH 351 a fall, even year course and to have MATH 453 as a spring, odd year course. These two courses will form one-year sequence in abstract algebra. We currently have one-year analysis sequence in fall, odd and spring, even years.

This change will allow us to have two year-long sequences that will alternate.
