Summer TIME ENERGY SAVINGS

Summer Shutdown!

Whether your summer will involve a world tour, a whirlwind of activity, or just hanging around, we hope you'll have a great time of rest and relaxation.

You — our faculty and staff members — have done a great job pitching in to save energy throughout the school year, and you deserve a break!

This shutdown period is an essential time for our energy program, too — now's the chance for you to do your part to help save money! As you prepare for Summer Break, take a few minutes to ready your area for this vital shutdown.

Remember, *every dollar saved on energy is a dollar saved for education.*

Do your part to support and fully participate in the energy conservation program

Before the break:

- Turn off, unplug or set back energy-using items i.e. computers, monitors, stereos, TVs, and printers.
- Clean out and unplug small refrigerators, microwaves, coffee makers and other small appliances that have a light or (non-vital) clock.
- Turn cooling temperatures up to 85F (if applicable).
- Shut all windows and close blinds.
- Now, go hang out with friends and enjoy your summer!
